

KHUSHI SHAH

SOFTWARE DEVELOPMENT ENGINEER • Full-Stack & Cross-Platform Developer

Surat, Gujarat | +91 8799265744 | khushis2328@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

B.Tech Information Technology graduate (2026) with hands-on software development experience across full-stack web (MERN) and cross-platform mobile (React Native) applications. Strong foundation in data structures, object-oriented design, and database systems, combined with production experience shipping 15+ screens and integrating 20+ REST API endpoints in Agile teams. Proficient in C/C++, Python, JavaScript, and TypeScript, with a demonstrated record of optimizing system performance — API response times, query efficiency, and rendering performance — at scale.

TECHNICAL SKILLS

Core CS Foundations: Data Structures & Algorithms, Object-Oriented Design, Database Design & Query Optimization, Complexity Analysis, RESTful API Design

Languages: C/C++, Python, JavaScript, TypeScript

Frameworks & Libraries: React.js, React Native, Node.js, Express.js, Redux Toolkit, Redux Saga

Databases: MongoDB, MySQL

Tools: Git, GitHub, Postman, VS Code, Figma

EDUCATION

Birla Vishwakarma Mahavidyalaya (BVM) — B.Tech, Information Technology

2022 – 2026

CGPA: 7.20 / 10

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks

PROFESSIONAL EXPERIENCE

Simform Solutions — Software Development Trainee (React Native)

Jan 2026 – Jul 2026

Ahmedabad, Gujarat

- Designed and implemented 15+ screens across 2 production applications using TypeScript, applying object-oriented component architecture over 6 months of Agile sprints.
- Engineered 20+ RESTful API integrations (Axios/Fetch) with centralized error-handling logic, applying structured edge-case and failure-state handling.
- Built and optimized state management logic (Redux Toolkit, Redux Saga) across 8+ feature modules, reducing state-related bugs by an estimated 30% through predictable, modular data-flow design.
- Improved list-rendering performance by ~25% on lower-end devices by optimizing FlatList rendering logic and reducing unnecessary component re-renders.
- Resolved 25+ bugs through Git-based code review and root-cause debugging within a 6–8 member Agile team.

SourceCube Technologies Pvt. Ltd. — Software Development Intern (MERN Stack)

Jun 2024

- Designed and optimized 15+ RESTful API endpoints and MongoDB schemas/MySQL queries, improving average query response time by ~20% through indexing and query-structure optimization.
- Built 5+ full-stack modules for internal web applications, applying object-oriented design principles across the MongoDB–Express–React–Node stack.

PROJECTS

FreshMart — E-Commerce Grocery Platform [GitHub](#)

React Native, TypeScript, Redux Toolkit

- Architected 19 screens end-to-end (authentication, product discovery, cart, checkout, order tracking), applying modular, object-oriented component design to eliminate duplicate logic across 7 feature modules.
- Built 8+ reusable UI components (AppBar, ProductCard, CategoryCard, Skeleton Loaders) shared across modules, cutting duplicate code and new-screen build time.

- Implemented secure, persistent authentication logic (encrypted token storage, email verification) with Redux Persist-backed offline state management, removing repeat logins across sessions.
- Built geolocation-based address resolution using reverse-geocoding algorithms for real-time delivery-address selection at checkout.

TaskEase — Offline-First Task Management App [GitHub](#)

React Native, Redux Toolkit

- Designed and implemented full CRUD logic with persistent local storage, structuring data-access patterns to remove network dependency entirely.
- Built reusable UI components and integrated calendar-scheduling logic, applying FlatList rendering optimizations for smooth performance on lower-end devices.

DataDash — Data Visualization Platform [GitHub](#)

MERN Stack, Chart.js

- Built a full-stack analytics platform enabling dynamic Excel-file parsing and algorithmic data aggregation for interactive 2D/3D chart generation (bar, pie, line) using Chart.js.
- Developed an admin panel for user and chart management, with structured data-parsing logic and Chart.js-based history tracking.

CookIQ — AI-Powered Recipe Recommendation System [GitHub](#)

MERN Stack, Python (ML)

- Built an AI-powered recipe recommendation platform using the MERN stack, integrating a Python-based ML model to predict ingredient quantities and dish suggestions through data-driven algorithmic logic.
- Integrated a context-aware conversational chatbot into the MERN application, applying structured conversation-state logic to personalize the user experience.

CODING & PROBLEM SOLVING

- Actively strengthening core DSA skills through consistent daily practice on LeetCode — focus areas: arrays, strings, trees, graphs, and dynamic programming — building on a coursework foundation in Data Structures & Algorithms.
- Applying algorithmic and object-oriented problem-solving principles from coursework directly into production code — state-flow design, API failure handling, and query/index optimization across professional projects.
